AOZ Studio Beta - Bug #756

Error messages report ALL errors at column 1.

05/21/2021 08:57 AM - Brian Flanagan

Status:	Resolved	**Start date:**	05/21/2021
Priority:	Normal	**Due date:**	
Assignee:		**% Done:**	0%
Category:		**Estimated time:**	4:00 hours
Target version:	none		
Affected version:	1.0.0 (B8)		

Description

In version 1.0.0 (B8), the error messages are working *better*. Although the error ***line*** is reported properly, the ***column*** number in the line is always returning 1. For example, the following code should produce an error at column 66:

```
E$=" the Heavens and the earth!"
Print "This is a test."; : Print "In the beginning","god created"E$ ' This should return an error
at column 66
' It's at that point we see that a comma or semicolon is missing.^
'                                                                66
End
```

...since it's at that point we know that a semicolon or comma has been omitted. Instead, the error is reported at byte 1.
(In fact, ALL errors are reported at byte 1.):

```
Compiling /Users/USERNAME/Documents/My AOZ Applications/Error Message Test/main.aoz
Generating code...
Error: syntax error at line 2, column 1, in file main.aoz

Task failed, no code generated...
```

History

#1 - 05/24/2021 06:35 PM - Brian Flanagan

re-tested in 1.0.0 (B8) 24 March version.
Still a problem.

#2 - 07/15/2021 04:51 PM - Francois Lionet

- Status changed from New to Resolved

Fixed!
