Affected version:	0.9.5		

Description

I've just discovered a strange issue with Screen Hot Spot. I've been using Screen Skew and Screen Scale in a program and everything was working fine until I installed the new install 0.9.5. Due to initial problems, I uninstalled that and went back to 0.9.5 Test 2, and when I did, found that Screen Skew and Screen Scale no longer worked in my program. I found that by adding the line Screen Hot Spot 0,0 and running the program once solved the problem permanently, and the program, and any others using those commands now work, even without the Screen Hot Spot Command. That means Screen Hot Spot must be making a permanent change to a file somewhere!

Also, Screen Hot Spot doesn't actually seem to move the Hot Spot for the screen, it just works like screen offset, unless the other commands aren't reading it correctly.
