<b>Target version:</b>	0.9.9.4-r3		
<b>Affected version:</b>	Beta RC2		

#### Description

Apparently the Keyboard API is implemented differently in different browsers.

At least...

For Meta Left: Firefox returns OSLeft for event.code, vs. MetaLeft like everyone else.

For PrtScr/SysReq: Firefox returns 44 vs. 124 for the event.which.

Both Safari and Firefox do not define the Insert key. Other browsers return event.code=Insert, event.which=45

#### History

#1 - 09/19/2020 09:53 AM - Brian Flanagan

- Status changed from New to Feedback
- Priority changed from Normal to Low
- Estimated time set to 4:00 h
- Affected version changed from 0.9.9.4-r2 to Beta RC2

I suppose the question is whether we should force the odd browsers to comply with the most common / logical implementation... or should we leave it to the user/programmer to deal with the discrepancies.
