I'm still getting this problem. I have to remove the last character from each read or my comparison with an entered search doesn't find a match.
Oddly, it's not showing the space in a 'print', but does show something in a 'len':

```
#manifest: "pc"
#displayWidth:1920
#displayHeight:1080
#fullScreen:true
#fps:false
#splashScreen:false

Open In 1,"test.txt"
```

```
Input #1,test1$
Input #1,test2$
close 1
print "'"+test1$+"'"+str$(len(test1$))
print "'"+test2$+"'"+str$(len(test2$))
if test1$="test1" then print "test1 found"
if test2$="test2" then print "test2 found"
wait key
```

My file has this in it:

```
test1
test2
```

The last line works, but the others don't. I have to put a carriage return after the test2 for it to be consistent, then I can remove the last char from each one so a comparison will return a true on another variable with the same string.

The output shows that test2 is found. See attached pic.
