

AOZ Studio Beta - Bug #589

empty.file is added to every empty folder in the AOZ application's resource folder. validator.js is added to every new AOZ application.

Affected version: Beta 1	
Description When creating a new application, empty.file appears in: <code>resources/1.images</code> <code>resources/2.icons</code> <code>resources/3.musics</code> <code>resources/5.sounds</code> <code>resources/filesystem/application</code> I understand that the empty.file is needed in order to copy the folders to the new application. Once the application has been created, however, these should be removed. validator.js is created in the application's root folder. Again, once the application has been created, this file should be removed.
