Autocomplete is shutting off, but not 100%. (Technically these are two different things, but I consider them the same.)
This is still a problem. And VERY annoying!

When we had Atom settings accessible I could fix this, but now I can't.

This should either turn off when I turn off auto-complete, or there should be a special setting for these, as there is in Atom.
For example: Try any of the following in the editor

(
result:
()

[
result:
[]

'
result:
"

"
result:
""

result:
`

There is an Atom setting to turn this off, but I don't recall what.
