### Description

A strange problem with the font height is happening. It might be something to do with GR WRITING 5 and using different font heights. This shows the font halving in height after the larger font:

```
#manifest: "amiga"  
#splashScreen:False  
#amigaFont: "arial"  
cls 0  
ink 2 // use for Amiga  
//ink 1 // Use for AOZ  
  
gr writing 5  
set font "arial",15  
text 10,40,"Testing the font spacing"  
gr writing 1  
set font "arial",40  
text 10,90,"Testing the font spacing"  
gr writing 0  
set font "arial",15  
text 10,120,"Testing the font spacing"  
gr writing 1  
set font "arial",25  
text 10,140,"Testing the font spacing"  
gr writing 5  
set font "arial",15  
text 10,160,"Testing the font spacing"  
wait key
```

I also have a program that has the same problem, but the fonts are seemingly randomly normal or squashed. Once it picks a letter to squash, all times it's used will be squashed, then after running a bit more and drawing the screen again all the characters can become squashed.
