

AOZ Studio Beta - Bug #742

Blank screen when using samples

04/26/2021 07:25 PM - Paul Kitching

Status:	Resolved	Start date:	04/26/2021
Priority:	Normal	Due date:

Category:		Estimated time:	0.00 hour
Target version:			
Affected version:	Beta 7		

Description

I an getting lots of problems with Beta 7. I tracked it down to having samples in the 5.samples directory. When I removed them it worked again, though I could also get the program to run bu adding a shoot command in a particular place. I created a new application as an AOZ one, then made this:

```
#manifest:"amiga"  
#splashScreen:false  
//shoot // disable this line to break the whole thing, unless you have no samples.  
print "End"  
wait key
```

I have a wav file in 5.samples.

If I enable the shoot command it runs and prints End. If I comment the line I just get a blank screen (AOZ player or browser). If I delete the sample it runs.

I've attached the HTML of the broken program.

I was told that the transpiler didn't include the audio scripts and that's why it failed.

I'm having similar random problems in another Amiga program. Various things are mis-behaving (blanks screen, screens not showing things I print, audio giving bank errors, etc), which might all be because of this problem.

History

I don't know if it matters, but I created a new application as an AOZ one, then used the Amiga tag in the program. I deleted the manifest so it would be an Amiga program. Maybe that combination causes it.

#2 - 04/26/2021 08:43 PM - Paul Kitching

I just made a new Amiga application, copied my Amiga program in, took out the #manifest command and left the manifest in the directory that I assume is an Amiga on.

Ran the program and samples wouldn't play, and some screens weren't showing, but it did run.

I copied a new image in and ran it again and I get the blank screen again. At this point I can't really use AOZ, at least with any Amiga programs.
