Target version:	none		
Affected version:	1.0.0 (B16) u27		

Description

Using (Profanity/Blasphemous) words (and many other word combos) such as the below in the mac aoz editor and running both in the previewer a few times or the full screen browser triggers (it instantly there), causes a blank tab to appear in the ide editor see screenshots and also it creates a user folder(s) with sub folders under your ide application name as well, again see screenshots. (Mac).

Words that trigger this below. The windows version does not do this only the mac.

Again other words can also do this on the mac.

..

Dick Wad

Dip Shit

Suck A Lemon

Eat Dirt

Go Root Your Boot

Go Tell Your Momma

etc

etc

Also this has the same issue Linux. (See screenshot) in (B16) U27.

It has nothing to do with profanity... or any other specific words. It has to do with certain instances of syntax errors.

This has been a problem on and off for quite some time... and yes, it is quite annoying!

It will also happen sometimes, if you leave off parameters on a command, or add extra parameters that don't fit into the proper syntax.

For example, both of the following are syntax errors, however:

This will cause the extra window to be opened...

```
Get Bob 0,0 TO 100,100,"abc"
```

...however, this will not:

```
Get Bob 0,0 TO 100,100,3
```
